Better Battery = Energy consumer's 'faster horse' thinking?

MyFC predicts that fuel cells will surpass batteries in energy density and cost efficiency in a few years

YOUR POWER SOURCE

MyFC initiates feasibility study with leading Chinese smartphone manufacturer

"Since we launched the world's smallest fuel cell LAMINA in early 2017, our intention has been to pursue the integration of our fuel cell technology in smartphones. This R&D project marks the start of that initiative, which we refer to as job #3," says Björn Westerholm, CEO of myFC.

February 26, 2018

The Indian Patent Office granted myFC a key patent application for JAQ Hybrid the world's smallest fuel cell charger, able to both produce and store energy thanks to the coexistence of battery and fuel cell. It can be charged using myFC's patented, green fuel, based on salt and water, as well as through a regular power outlet.

What could happen in 12 years...?

2028

2030

What if fuel-based innovations capture the head, heart & wallets of the our communities?

Retail-shelf energy becomes unexpected innovation of 2020s:

- Customers *cut the cord* and reduce grid-use
- New types of competition + coopetition emerge
- Do we get into the portable fuels business?
- Do we get into managed services of embedded systems?
- Do we support a range of fuel mixtures: traditional CH gases, hydrogen (renewable vs natgas derived) and synthetic gas?

Distributed Energy Resources**

Policy Hinting at Favorites: Community Solar & Batteries

Community Storage: Aggregated System level Solutions

"Community Storage" is an emerging term for programs that aggregate distributed energy storage resources that are located throughout a community, such as water heaters, electric vehicles, and interconnected storage batteries, to improve the operational efficiency of electric energy services to consumers.

The Community Storage Initiative

[Join Our Email List](#)

The co-founders of the community storage initiative ask for your support:

- Click on the link above to join the Initiative's email list to receive information about the Initiative and upcoming events
- Promote an "above the baseline" approach to electric water heating, electric vehicle charging, and residential battery use marketed as 'Community Storage'
- Share your business model and best practices around 'Community Storage'

We ask you to follow the Guiding Principles of The Community Storage Initiative:

1. Voluntary Participation (by the utility, home, business or individual)
2. Education & Training (information resources, program templates, quick-start guides, etc.)
3. Market Acceptance (locally, regionally and nationally)

Electrification of Vehicle Fleet

Global PEV annual sales and market share, 2010 through 2016

Source: Electric Drive Transportation Association, "Electric drive sales dashboard," and Jeff Cobb, "Top ten plug-in vehicle adopting countries of 2016," HybridCars, January 17, 2017.

Figure 2. Projected PEV share of total light-duty vehicle sales

The IEA's Reference Technology Scenario (RTS), projecting 56 million electric cars in circulation by 2030, reflects projections that respond to policies on energy efficiency, energy diversification, air quality, and de-carbonization that have been announced or are under consideration. The IEA's 2DS scenario, projecting 160 million EVs in circulation by 2030, occurs in a context consistent with a 50% probability to limit the expected global average temperature increase to 2°C. We estimated annual sales required to meet IEA's EV stock projections for 2030 and then calculated the EV share of sales as a percent of total light-duty vehicle sales projected by Bloomberg New Energy Finance for 2030.

Source: Deloitte analysis.

Electrification of Vehicle Fleet: The Long Game & Big Picture

Hybrid ICEs

Plug-in EVs

Fuel-based EVs
Hydrogen Rich Fuels

Marathon, Not a Sprint

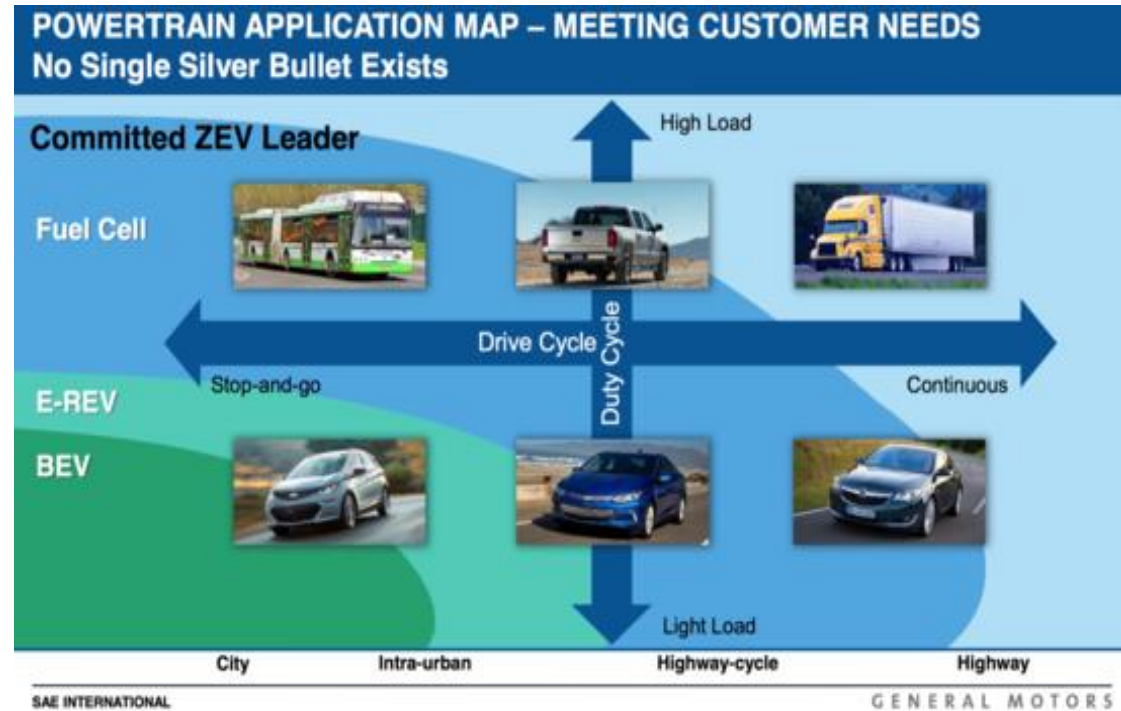

More than three-quarters of executives (77% global; 85% U.S.) say fuel-cell electric mobility will be the real break-through for electric mobility.

***... Elon Says
Game-Over
Batteries Won!***

***... but Industry betting on
integration & fuel-based EVs***

Caution on Early Bets with Electric Vehicle Transition

- ❑ OEMs Prefer Cost to Weight
- ❑ Integration Gives Customer ROI
- ❑ Keeps Big Oil in Game
- ❑ Urban Market Infrastructure
- ❑ Fleets (Uptime)
- ❑ Autonomous Fleets (Power-Hungry)

Electrification of Vehicle Fleets

Opportunities

- Vehicle to Grid (V2G) Service Model
- Managed Services for Fleets
- Transform Excess Electrons
to Higher Value H2 Fuel
- Hydrail (Rail Industry)
- Drones / UAVs

Challenges

- Elon's Twitter Account
& Early Adopter Enthusiasm
- Viability & Sustainability
- Regulatory Certainty
- Business Model

GRID+

Meet your new agent

The Grid+ Smart-Energy Agent is an always-on device that pays for your electricity in real time and always finds the best price available.

RESPOND TO DEMAND

The intelligent agent can help balance load on the grid by controlling smart devices, such as a NEST thermostat or a Tesla Powerwall, to generate extra revenue.

ARBITRAGE ENERGY

Your agent can leverage energy storage, such as the Tesla Powerwall, to purchase energy when it is cheap and sell it when prices peak.

Innovative Proof of Concepts... Shared Infrastructure
